- A.5 ELEMENTS BY APPLICATION TYPE (TRANSMISSION SEQUENCE)

USE OF THE TECHNICAL SPECIFICATION

Update - January 2023: This technical specification was released in January 2023 and replaces the previous version dated January 2001.

The following changes have been made:

• Formatting has been applied to reflect the technical specification has been published by the London Market Joint Venture.

1.1 Background to the Project: 3rd paragraph wording amendment - spec amended.

2.1 Registration, 2.3 Audit & Control, 2.4 Service Desk, 2.5 Interbridge Tables & 2.6 Test Transmissions has been updated to remove any old references to LPCX and has been replaced with those for the DXC Service Desk - spec amended.

4.2 Segment Definitions: The segment ID field was missing in the existing tech spec, this has been updated for all the segments - spec amended by the mainframe team.

4.2 Segment Definitions MOA Monetary Amount Details: When checking the programme layout this field was declared as S9(16)V99 so has been corrected - spec amended by the mainframe team

• 4.2 Segment Definitions CTA Contracts: Added in the proposed structure with update fields - spec amended.

1 INTRODUCTION

1.1 BACKGROUND TO THE PROJECT

Note: Due to the continued existence of differing business practices in the Marine & Aviation and Non-Marine Markets, LPC still processes separate accounting transactions for companies that have 'ILU' and 'Lirma' style underwriting stamp codes. This document provides details of the data that will be provided for 'ILU' de-linked premium signings.

LPC have investigated the most efficient and cost-effective way for member companies to receive data available through de-linked premium submissions, giving the opportunity for members to take down early advice of risk details, signed lines and premium in advance of settlement.

In order to minimize the impact on company systems and avoid the need to develop a completely new message set, it was decided that a new version of the LPC daily signings message, ILUCSM, will be provided called IPCCSM. It's format and content are almost identical to the current daily signing message except for some data items which cannot be provided at this stage in the processing cycle.

1.2 MESSAGE DESIGN STANDARDS

It is intended to use generic EDIFACT segments throughout the message. Each segment will contain a particular type of data (e.g. A date or a reference) and will be repeated as many times as necessary. The data contained in the segment will in each case be identified by a qualifier. This approach will lend the message a considerable degree of flexibility for future enhancement.

The Companies Signing Message (identified as IPCCSM) conforms with the following standards: -

- Electronic Data Interchange for Administration, Commerce and Transport (EDIFACT).

- EDIFACT (UN ECE Syntax Rules) ISO 9735
- London Insurance Market Data Standards.
- London Insurance Market Edifact Standards.

Several messages may be transmitted together in one 'interchange'. Each interchange will be enveloped by standard EDIFACT interchange header (UNB) and trailer (UNZ). segments.

Each message will be enveloped by standard EDIFACT message header (UNH) and trailer (UNT) segments.

1.3 Terms And Definitions

<u>Interchange</u>

A transmission of information between the Network members.

<u>Message</u>

A collection of data that represents a business transaction. Several messages may be transmitted together in one transmission.

<u>Segment</u>

A logical grouping of data that forms a part of a message. Each segment is given a unique identifier and has a pre-defined position in a message.

Data Elements

An individual item of data which is included in the transaction.

Component Data Elements

A subordinate item of data which makes up a Data Element.

1.4 USE OF SEPERATORS

Each Component Data Element (CDE) is separated by a single COLON character. If a conditional component data element is omitted its separator is retained if further components follow

There is no COLON separator after the last component after the last component in an element and separators for components missing at the end of an element are suppressed.

E.g.

CDE:CDE CDE::CDE (the second component is missing) CDE:CDE (the last component is missing)

Each Data Element (DE) is separated by a single PLUS character. If a conditional data element is omitted, its separator is retained if further data elements follow in that segment.

There is no PLUS separator after the last element in a segment, and separators for elements missing at the end of a segment are suppressed.

E.g. DE+DE+DE DE++DE (the second element is missing) DE+DE (the last element is missing)

Each segment is terminated by a single QUOTE character.

E.g. DE+DE+DE'

2 OPERATING CONSIDERATIONS

2.1 I.E. REGISTRATION

Please refer any queries to the DXC Service Desk by email to service.centre@dxc.com or call 0870 380 0830.

Registration forms are also available from the following:

Email: SM.CSN.Applications@DXC.com

2.2 **OPERATING TIMETABLE**

Signings will be transmitted each night, for the completed date of release. Messages will normally be available for collection from the recipient's mailbox by 06.00 the following day.

2.3 AUDIT AND CONTROL

Please refer any queries to the DXC Service Desk by email to service.centre@dxc.com or call 0870 380 0830.

and in the London Insurance Market Edifact Standards.

2.4 DXC SERVICE DESK

Please refer any queries to the DXC Service Desk by email to service.centre@dxc.com or call 0870 380 0830.

2.5

2.6 TEST TRANSMISSIONS

A test package will be made available for general use. In addition, facilities will be provided for companies to specify their own test data requirements.

Further details of test facilities can be obtained by contacting the DXC SERVICE DESK

2.7 TEST TRANSMISSIONS

Interchanges will be available for re-transmission for six years.

The original INTERCHANGE CONTROL REFERENCE and MESSAGE NUMBER will be repeated in a re-transmission.

2.8 SEQUENCE OF TRASACTIONS

Transactions will be sequenced by Company Identification Code and Company Reference. If there is more than one transaction for the same company reference, these will be presented in order of ILU signing reference.

2.9 SELECTIVE DATA

Interactive facilities will be provided for message users to select the specific elements of data required for transmission.

Identifying and accounting details will always be provided. Other data elements will only be sent if selected.

The data selected will be provided for all companies in the transmission group. However, the selection can be varied for each type of transaction.

NB. Not all of the data elements described as being provided for an application type will always be available for a particular transaction.

2.10 CHANGE CONTROL

Enhancements to the IPCCSM message will be grouped together at convenient intervals, to form a new release of the message. The UNH Message Version Number will be incremented for each new release.

All enhancements to be made, and the timetable for their introduction, will be agreed by a message user group. Full details of the agreed enhancements will be published to all ILU members at least three months prior to implementation.

When a new version of the message is introduced, the ILU will continue to support the existing version for a further six months, to allow time for all users to amend their systems.

During that period, users may take the new version for testing, while continuing to receive the old version for live use.

After six months the old version will be withdrawn.

3 OPERATING CONSIDERATIONS

3.1 MESSAGE DESIGN

The new company de-linked signing message (IPCCSM) can be logically divided into three sections:

- HEADER DETAILS, which identify the parties in the transaction and provide their respective references for it.

- ACCOUNTING DETAILS which inform the company of the amounts for settlement.

- SUPPORTING INFORMATION which includes all other details of the transaction.

EDIFACT generic segments are used throughout the message.

3.2 STRUCTURE DIAGRAM

The following pages provide a diagrammatic view of the message, showing the three sections described above.

Individual segments are identified by a box containing a 'tag' (e.g. 'UNH') which corresponds to that used in the detailed description of each segment given in section 4 of this document.

Within each box there is an 'M' or a 'C' shown in the top left hand corner, and also a numeric value shown in the bottom left hand corner.

The numeric value represents the number of times the segment may repeat in the position shown within the message. An 'M' means that at least one occurrence of the

segment is mandatory (i.e. it must be transmitted), whilst a 'C' means that the segment is conditional (i.e. it need not be transmitted).

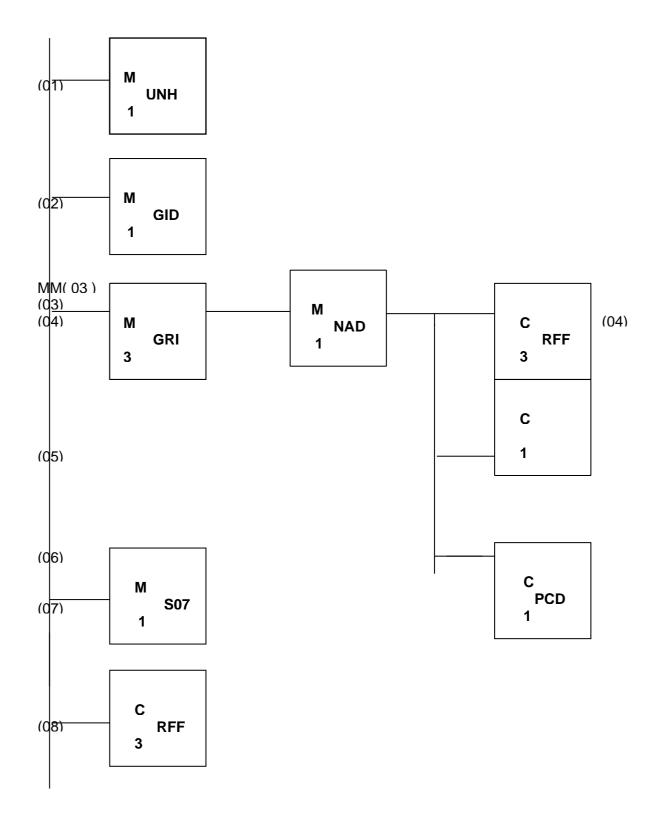

It should be noted that the conditional nature of a segment as defined within the diagram may be modified by additional stipulations shown within the Completion Instructions for the message.

To the right of each box there is a number, shown in brackets, which uniquely locates the segment in the message structure. For example, the CUX segment appears in two places in the message. These are distinguished as segments (10) and (17). This location number is used in section 5 to map data elements into the appropriate segment.

Some segments are part of a 'segment group'. The diagram signifies the start of a group by the addition of an extra box describing the group. All segments within the structure to the right of this are then part of the segment group. Within this extra box a group reference is shown (e.g. 'GR1', GR2, etc) and a similar notation as described for individual segments is shown in the top and bottom left hand corners. This notation has the same meanings as have been previously outlined, except that they apply to the whole group of segments.

Individual segments within a group also have their own notation in exactly the same way as other segments. However, it should be noted that the notation will only apply if the whole segment group has been transmitted. For instance, within 'GR2' in the diagram, the MOA segment is shown as 'M' (mandatory), although the segment group of which it forms a part is shown as 'C' (conditional). In this case, the group need not be transmitted at all, however if it is transmitted, then the MOA segment must be transmitted.

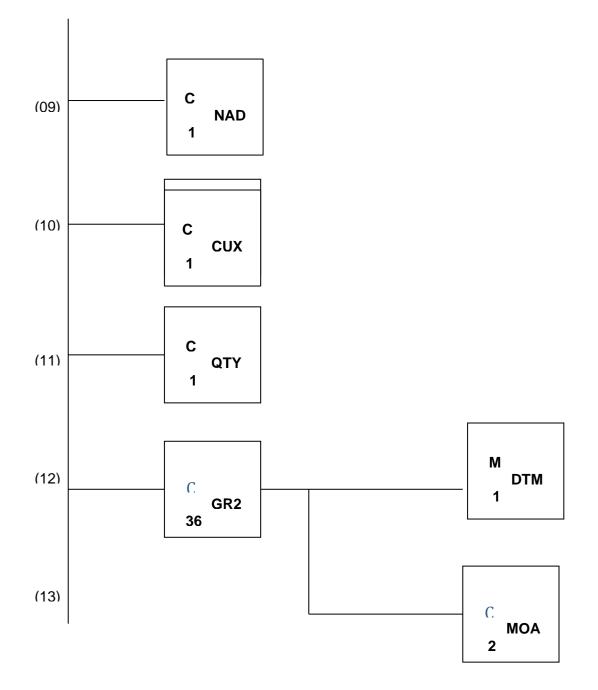

SECTION 1 - HEADER DETAILS

4 SEGMENT DIRECTORY

4.1 SEGMENT DESCRIPTIONS

CTA CONTACTS

A segment which gives the name of a person or department in the participants organisation to whom communication about the transaction should be directed.

This segment is only used to supply broker contacts.

CUX CURRENCIES

A segment which associates two currencies with a rate of exchange.

DTM Date/Time Reference

A segment which gives details of the dates relating to the transaction.

This segment is repeated for each date.

FTX FREE TEXT

A segment which allows additional free format text details relating to the transaction.

This segment is repeated for each type of text.

<u>GID General Indicator</u>

A segment which provides various codes and indicators that define and qualify the transaction.

This segment is repeated for each code and indicator.

LOC Location Details

A segment which gives details of any locations relating to the transaction.

This segment is repeated for each location described.

MOA Monetary Amount Details

A segment which gives details of the various amounts

This segment is repeated for each amount.

NAD Name and Address

A segment which identifies a participant in the transaction.

INTERNATIONAL PROCESS COMPLIENCE - COMPANY SIGNING MESSAGE This segment is repeated for each participant.

PCD Percentage

A segment which provides details of any percentages involved in the transaction.

This segment is repeated for each percentage.

<u>OTY</u> Quantity

A segment which provides details of any quantities involved in the transaction.

This segment is repeated for each quantity.

RFF Reference

A segment which gives the participant's reference to be used in communications about the transaction.

This segment is repeated for each reference.

S07 Separator 07

A dummy segment required to avoid segment collision.

This will contain a single character with a value of 'S'. <u>S15 Separator 15</u>

A dummy segment required to avoid segment collision.

This will contain a single character with a value of 'S'. S25

Separator 25

A dummy segment required to avoid segment collision.

This will contain a single character with a value of 'S'.

UNB Interchange Header

A mandatory segment which starts a communication interchange. It contains sender and recipient addresses and provides a sender's reference to identify the interchange.

UNH Message Header

A mandatory segment which starts a message. It identifies the type of message and provides a message reference number for audit and control.

UNT Message Trailer

A mandatory segment which ends a message. It repeats the message reference number given in the UNH segment, and provides a count of the number of segments in the message (including the UNH and UNT segment)

UNZ Interchange Trailer

A mandatory segment which ends a communication interchange. It repeats the interchange control reference given in the UNB segment and provides a count of the number of messages in the interchange.

4.2 SEGMENT DEFINITIONS

The following pages provide a list of all of the segments that will be used in the IPC Companies Signing message.

Each segment element is identified, accompanied by the format of the element and an indication if the ILU usage.

Data formats are described using the following conventions:

- 'X' denotes an alphanumeric field
- '9' denotes a numeric field
- (nn) indicates the number of characters permitted.

Decimal points are explicitly shown, and amount fields have a leading sign, signified by 'S'.

The ILU usage of the element is shown as:

- MANDATORY The element will always be present if the segment appears in the message.
- CONDITIONAL The element may be omitted, or the requirement for it is subject to specific conditions.
- NOTE: Not all segment elements are used. See section 4.3 for details of those which are.

Where elements are used together as components of a group, the group data element is shown without a data format. The component elements follow, and are indented.

The standard Edifact segments UNB, UNH, UNT and UNZ are not detailed here as their use is not specific to this message. Please refer to section 7 of the London Market User Manual for details of the contents of these segments.

4.3 SEGMENT ELEMENTS USED

CTA CONTACTS

Contact Function Code

A code which defines the type of contact.

A full list of values is contained in Appendix 3.

Department or Employee

The name of the contact for information regarding the transaction, as defined by Contact Function Code above.

Communication Number

The telephone number of the contact for information regarding the transaction.

CUX CURRENCIES

Currency Code (Reference)

The ISO currency code for the original currency. <u>Currency Qualifier (Reference)</u>

A code which defines the usage of the reference currency.

Currency Code (Target)

The ISO currency code for the settlement currency.

Currency Qualifier (Reference)

A code which defines the usage of the target currency.

Rate of Exchange

The rate of exchange between the Reference Currency and the Target Currency above.

DTM DATE/TIME REFERENCE

Date/Time Qualifier

A code which describes the date to which the segment relates.

A full list of values is contained in Appendix 3.

<u>Date</u>

Details of the date, as described by Date/Time Qualifier above.

All dates will be presented in the CCYYMMDD format.

FTX FREE TEXT

Text Subject Code

A code to identify the type of text following.

A full list of values is contained in Appendix 3.

<u>Free Text</u>

Free format lines of narrative, as described by Text Subject Code above.

GID GENERAL INDICATOR

Code/Indicator

The code value applicable.

Code/Indicator Qualifier

A code which defines the purpose of the code indicator.

A full list of values is contained in Appendix 3

LOC LOCATION IDENTIFICATION

Place/Location Qualifier

A code which describes the type of location.

A full list of values is contained in Appendix 3

Name of Place/Location, Coded

A coded identification of the location, as defined by Place/Location Qualifier above.

Name of Place/Location

A free form description of the location, as defined by Place/Location Qualifier above.

MOA MONETARY AMOUNT DETAILS

Monetary Amount Qualifier

A code which defines they type of amount.

A full list of values is contained in Appendix 3.

Monetary Amount

The value of the amount, as defined by Monetary Amount Type above.

<u>Currency Coded</u>

The ISO currency code for the amount above.

Status Coded

A code which defines the usage of the amount.

NAD NAME AND ADDRESS

Party Qualifier

A code which defines the party to whom the name and address details apply.

A full list of code values is contained in Appendix 3.

Party Identification, Coded

A coded identification of the party, as defined by Party Qualifier above.

INTERNATIONAL PROCESS COMPLIENCE - COMPANY SIGNING MESSAGE Name and Address

Free format details of the above address of the party, as defined by Party Qualifier above.

<u>Party Name</u>

A free format identification of the party, as defined by Party Qualifier above.

PCD PERCENTAGES

Percentage Qualifier

A code which defines the type of percentage.

A full list of code values is contained in Appendix 3.

<u>Percentage</u>

The value of the percentage, as defined by Percentage Qualifier above.

Percentage Basis Qualifier

A code which defines the use of the percentage.

<u>OTY QUANTITY</u>

<u>Quantity Qualifier</u>

A code which defines the use of the quantity.

<u>Quantity</u>

The quantity value, as applicable.

RFF REFERENCES

Reference Qualifier

Describes the party to whom the references apply.

A full list of code values is contained in Appendix 3.

Reference Number

The reference, as defined by Reference Qualifier above.

5 DATA ELEMENT DIRECTORY ACCUMULATED PREMIUM TO DATE

The total amount of all premiums (including the original deposit) which have been processed against the original signing reference, excluding reinstatements and rate of exchange adjustments.

TCG Ref	Format : -9(13).99
Notes:	This will only be provided if the original premium was signed by the LPC after 1/1/91.
Appears in	MOA segment (24) as MONETARY AMOUNT with a Monetary Amount Qualifier of A01
For Application Types	s : Excess of Loss Adjustment

- ACTUAL PAYMENT DATE

The date upon which it is agreed that settlement of a particular transaction amount will take place between the Broker and the Bureau or Underwriter.

Note:The date will always be in the format CC000000 where CC = Century.TCG Ref.5.2Format: 9(8)

Appears in : DTM segment (12) as DATE with a Date/Time Qualifier of 502

For Application Types : All

- ACTUAL PREMIUM DUE

The gross amount of the adjustment premium, before deductions, on which the insurers share can be directly calculated using the underwriters signed line.

Except where co-reinsurance is in effect, this can be calculated by applying the Slip Order Percentages to the Adjustment Premium Due.

TCG Ref.	-	Format	:	- 9(13).99	
Appears in	:	MOA Segment (24) as M Amount Qualifier of A15	ONETA	RY AMOUNT with a	Monetary

For Application Types : Excess of Loss Adjustment

ADJUSTED AMOUNT

This is calculated by applying the Adjustment Rate, to the Premium Income figure. If reapportionment required the figure should be the resultant after having applied the reapportionment factors.

TCG Ref. Format : - 9(13).99

Appears in MOA Segment (24) as MONETARY AMOUNT with a Monetary : Amount Qualifier of A02.

For Application Types : Excess of Loss Adjustment

ADJUSTED AT DATE

The date up to which the premium income figures are taken.

TCG Ref. Format : - 9(8)

DTM segment (20) as DATE with a Date/Time Qualifier of D01 Appears in :

For Application Types : Excess of Loss Adjustment

ADJUSTED OUTSTANDING LOSS AMOUNT

Adjusted total amount of outstanding losses reflecting cash loss collections or additional information received subsequent to the periodic account.

TCG Ref. 8.33 8.36 Format - 9(13).99 -: Appears in MOA segment (24) as MONETARY AMOUNT with a Monetary : Amount Qualifier of _

- 833 (for 100% amount in original currency)
- 835 (for company share in original currency)

For Application Types **Proportional Treaty Statement** :

_

ADJUSTMENT PREMIUM DUE

This is calculated by subtracting the Previously Paid Amount from the Adjusted Amount taking into account any minimum premium stipulation.

TCG Ref. Format : 9(13).99 Appears in MOA segment (24) as MONETARY AMOUNT with a Monetary : Amount Qualifier of A03

For Application Types Excess of Loss Adjustment :

- ADJUSTMENT RATE

The percentage which is applied to Premium Income to calculate the Earned Premium.TCG Ref.-Format: 9(3)V9(7)

Appears in : PCD segment (21) as PERCENTAGE with a Percentage Qualifier of P01

For Application Types	:	Excess of Loss Premium
		Excess of Loss Adjustment

APPLICATION TYPE

A code allocated by the LPC to categorise the transaction being supplied in this message.

Note:	See Appendix 1 for details of the Application Types provided in this message.			
TCG Ref.	-	Format	:	99
Appears in	:	GID segment (02) as COD Qualifier of X01	E INDI	CATOR with a Code/Indicator

For Application Types : All

- <u>ATTACHMENT INDICATOR</u>

Indicates the presence of some additional separate narrative details supplied with the Closing. Typically 'specification' supplied by the Broker for distribution to Underwriters.

Values		: Y attachments N no attachment		are are	
TCG Ref.	5.32		Format	:	X
Appears in	:	U	(14) as CODE/ ndicator Qualif		
For Application Types : Excess of Loss Premium Premiums/AP's/RP's Proportional Treaty Statement					

- AUDIT/DTI CODE

A structured code defining the audit classification and the coding needed for returns to the Department of Trade and Industry.

IPCCSMAPP – VERSION 1.0
